

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strike through~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND the claims in accordance with the following:

1. (CANCELLED)

2. (Currently Amended) A mobile terminal comprising:

- a first antenna as an omnidirectional antenna;
- a second antenna as directional antenna;
- a switching unit for switching over the antenna for receiving;
- a printed circuit board mounted with the first antenna and the second antenna;
- a first ~~box~~-body holding the printed circuit board; and
- a second ~~box~~-body rotatably secured to the first ~~box~~-body,

wherein the first antenna is provided in ~~the~~a vicinity of a front edge portion on ~~the~~a side opposite to a securing side of the first ~~box~~-body on the printed circuit board so as to keep the first antenna remote from a human body by extending the first body away from the securing side and away from the human body when the first body and the second body are unfolded and the second body is held in a hand of the human, and

the second antenna is provided on a flip side of a ~~surface~~the side of the printed circuit board facing the second ~~box~~-body ~~on the printed circuit board~~ when the first ~~box~~-body and the second ~~box~~-body are folded together so as to set a directional antenna pattern to face away from ~~a~~the human body when the mobile terminal is kept next to the human body in a folded state in which a flip side surface of the second ~~box~~-body facing the first ~~box~~-body also faces the human body.

3. (Currently Amended) The mobile terminal according to claim 2, wherein the switching unit switches over the receiving antenna, corresponding to whether the first ~~box~~-body and the second ~~box~~-body are in a folded state or in an unfolded state.

4. (Previously Presented) The mobile terminal according to claim 3, wherein the switching unit, in the case of the folded state, switches over the receiving antenna to the second antenna and, in the case of the unfolded state, switches over the receiving antenna to the first antenna.

5. (Previously Presented) The mobile terminal according to claim 2, wherein the switching unit switches over the receiving antenna in accordance with a receiving sensitivity.

6. (Previously Presented) The mobile terminal according to claim 5, wherein the switching unit, when a specified receiving sensitivity is not obtained during a receipt by the first antenna, switches over to the receipt by the second antenna.
